

The Premier Enterprise Cloud Storage Service

Company Brief

Nirvanix's mission is to ease the burden of storage management for organizations while enabling secure and reliable access to data worldwide. Our goal is to work collaboratively with clients to understand their storage, access and retention requirements and execute the right strategy to meet these needs while extending the life of their existing storage and networking assets.

Headquartered in San Diego, California, Nirvanix is privately held and has raised more than \$23 million in funding from world-class investors including Intel Capital, Valhalla Partners, Mission Ventures, Windward Ventures and The European Founders Fund. Nirvanix customers range from Internet startups to Fortune 10 organizations and include Arizona State University, Nero and The Planet, among others.

Enterprise Cloud Storage

Nirvanix offers a fully-managed cloud storage service designed from the ground up for the enterprise. Powered by our global Storage Delivery Network (SDN), Nirvanix's cloud storage solution has proven itself to be the best storage resource for today's enterprises. The Nirvanix network, coupled with our services and 24x7 access to knowledgeable support staff, optimizes implementation and ongoing use of cloud storage to meet all of your business requirements.

Secure and Reliable

Nirvanix has undergone a Big 4 security audit and has certified control processes via the Statement on Auditing Standard 70 (SAS 70). A standard SLA of 99.9% is offered with the option to increase guaranteed availability to 99.999% depending on the file replication policy chosen.

Global Network

The Storage Delivery Network scales instantly to meet your storage requirements and is available via a single global namespace meaning you write to one location regardless of where you specify your data to be stored within the network.

Enterprise Support

In addition to the Solutions Team assigned to every Enterprise account, Nirvanix NOC staff monitor the service 24x7 guaranteeing that day or night you can reach someone at Nirvanix.

Solution Services

Nirvanix Solutions Executives work directly with cross-functional teams within your organization to ensure that integration of Nirvanix Cloud Storage meets your requirements while optimizing the utilization of your current storage assets.

Nirvanix Customer Quotes

"By not needing to worry about tape, we've eliminated management issues such as monitoring hardware, swapping tapes, and having to hire a service to pick them up and store them at an offsite location. With Nirvanix, we are reassured that our tertiary copy is now online and accessible within seconds."

- **Dan Stanzione**, Director
Fulton School of High Performance Computing, ASU

"By integrating a Nirvanix node into our data center we were able to supplement The Planet Storage Cloud's on-premise storage by offering our customers access to Nirvanix' high-performance, globally distributed network."

- **Rob Walters**, General Manager
Storage & Data Protection

"As a company that serves medium to enterprise sized companies, we needed to find a cloud storage provider that was scalable, secure, and compliant. We had the option of selecting any storage provider... Nirvanix had them all beat by a mile."

- **Edwin Fu**
Product Manager/Co-founder

The Storage Delivery Network

Nirvanix has built a global storage network referred to as the Storage Delivery Network™ (SDN), comprised of five clustered storage nodes strategically located to optimize global access (US-California, US-Texas, US-New Jersey, Germany and Japan). The SDN intelligently stores, delivers and processes storage requests in the best network location, providing the optimal user experience. With the ability to store multiple file copies in multiple geographic nodes, the SDN enables unparalleled data availability for enterprises. By using the Nirvanix SDN versus alternatives such as adding network storage systems or using first generation online storage platforms, businesses benefit from better flexibility and control for their operations.

Standards-Based Access and Easy Management

Accessing and managing storage on the SDN is easy. Nirvanix offers a broad range of standards-based interfaces and an integrated management tool:

- **Nirvanix Web Services API:** Available via SOAP and REST interfaces over HTTP or HTTPS, the Nirvanix Web Services allow integration of Nirvanix Cloud Storage into any HTTP accessible application or device.
- **Nirvanix CloudNAS®:** Recognized as one of TechTarget's 2008 Products of The Year (Storage Management Tool category- Bronze Medal), CloudNAS is a fast, secure and easy way to gain access to the benefits of Cloud Storage. Organizations can install CloudNAS and turn any server on their network into a gateway to the Cloud, accessible by many existing applications and processes via standard storage protocols (CIFS and NFS). It is available for Windows or Linux.
- **Nirvanix CloudFTP™:** CloudFTP is an FTP Proxy that enables access to the SDN through any popular FTP client via the File Transfer Protocol standard. It is available for Windows, Linux or MAC.
- **Nirvanix Management Portal (NMP):** NMP is a web-based tool that provides instant insight into service status, account features, usage and costs. Billing and metering can be viewed in aggregate, per application, or by specific end-user.

Ideal Use Cases

Offsite Data Protection

Preserve valuable data offsite with encrypted data in flight and at rest in any of Nirvanix's globally distributed storage nodes.

Tier N Storage

Meet or exceed SLAs and extend the life of current storage assets, while reducing costs, by introducing Nirvanix Enterprise Cloud Storage as a new Tier within your current infrastructure.

Distributed Content and Collaboration

Enable collaboration within asset management applications by using Nirvanix to consolidate, classify and distribute content for re-use by employees, support staff or end users.

Embedded Storage

Integrate online storage into your application or device via the Nirvanix Web Services API and insure instant scalability without needing to purchase or manage hardware.
